

Token Distribution Fairness: DAICO vs RDA across Calibration Profiles

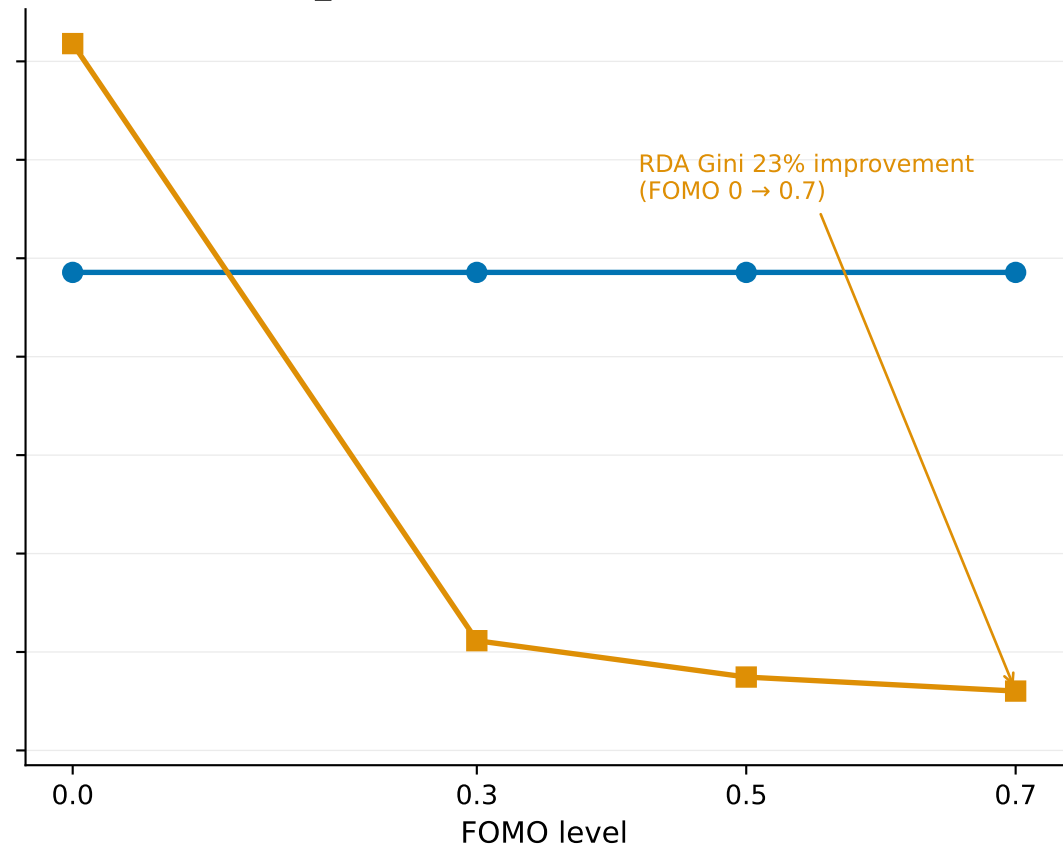

FOMO Effect on Fairness: rising FOMO broadens RDA participation and lowers its Gini

small_project (Solana-scale)

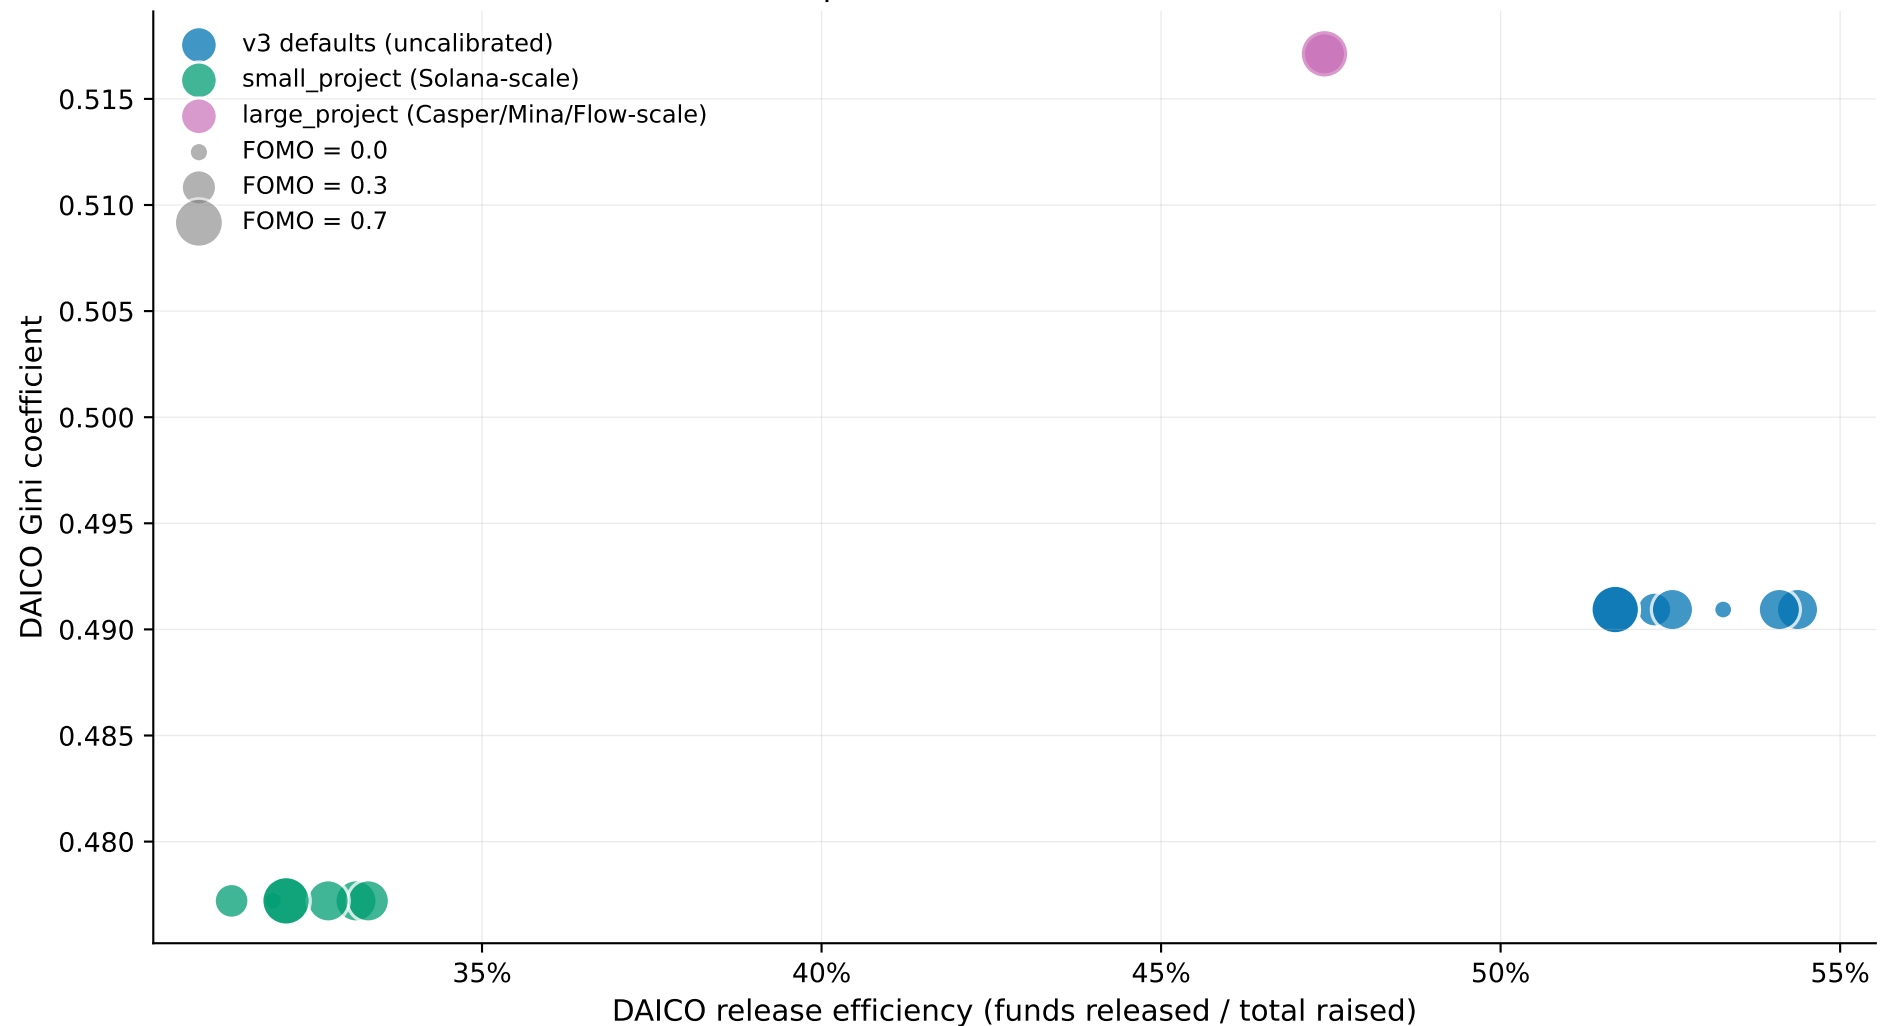

large_project (Casper/Mina/Flow-scale)

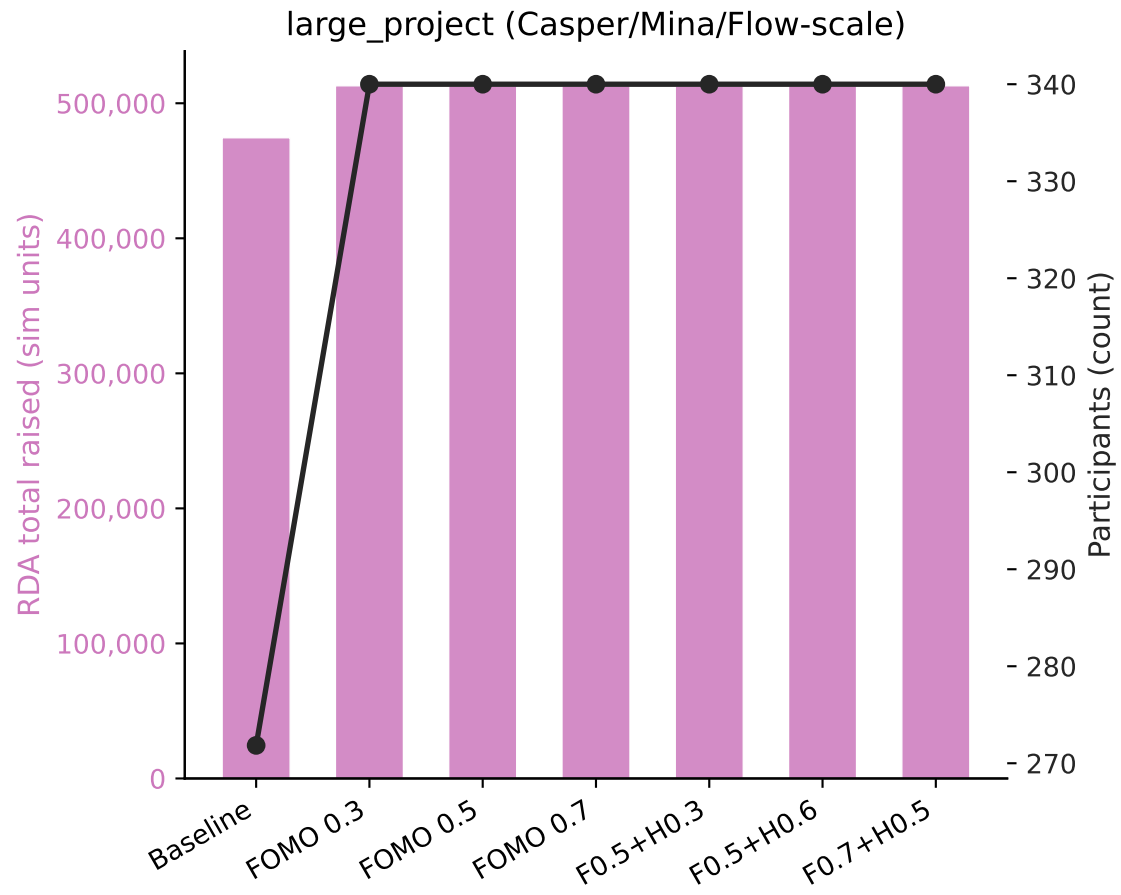

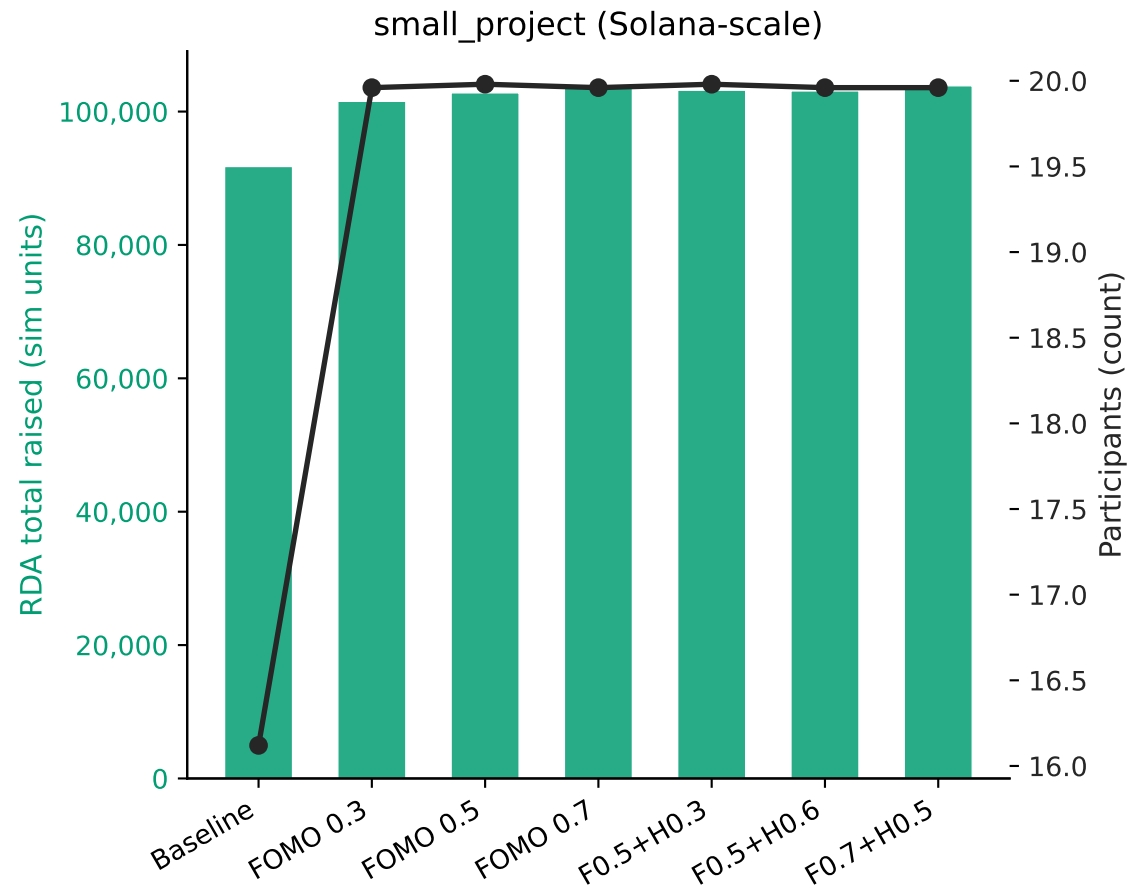

Efficiency vs Fairness Trade-off (DAICO, all scenarios)

point size = FOMO level

RDA: FOMO drives participation and total raised (bars = raised, line = participants)

Comprehensive Metric Comparison: 7 scenarios x 3 calibration profiles
(participants & volatility colored within-profile; efficiency & Gini colored globally)
