

Token / outcome distribution fairness: DAICO vs RDA vs LAF (v5.0, N=50)

FOMO effect on fairness: RDA broadens participation as FOMO rises; DAICO and LAF are flat because their raise is FOMO-insensitive

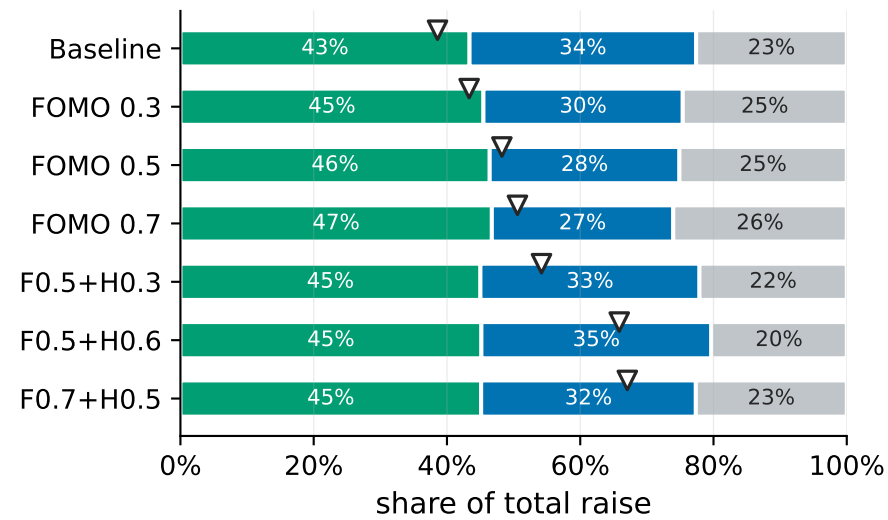

Team funding vs fairness: each grey line joins DAICO and LAF for the same scenario on the same agent population (marker size = FOMO)

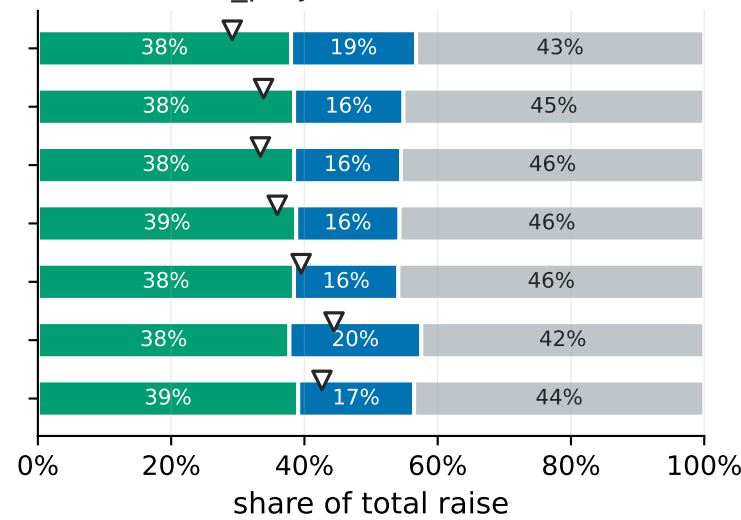

LAF: where the raise ends up after the horizon (team / investors / vault), with DAICO's retention on the same agents for reference

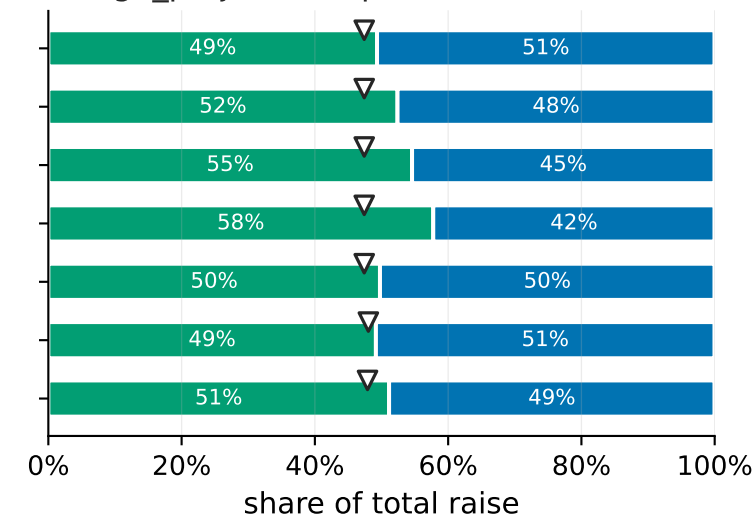

v3 defaults (uncalibrated)

small_project (Solana-scale)

large_project (Casper/Mina/Flow-scale)

▽ DAICO capital retention (reference)
team received (stream)
returned to investors (rage quit)
still in vault

Metric comparison v5.0: 7 scenarios x 3 profiles, DAICO / RDA (left) and LAF (right)
 participants and volatility coloured within profile; all other columns coloured globally
